

# MEOW!2

**GAME PROGRAM**  
For the Atari 2600 Video Computer System

**KIKI 2023**

## **Introduction:**

In a parallel universe different from our own, brave cat Max, who loves cakes, faces the challenge of reaching a slice of cake on the highest shelf in the restaurant kitchen. Max possesses a special power that allows him to freeze falling objects as long as he has energy.

After clumsily knocking down items from the top shelves and losing six lives as a result, Max decides that he must prevent the objects from falling to the ground in order to avoid drawing the chef's attention and losing his remaining three lives.

As Max climbs through the bakery levels, he notices that some shelf supports are missing. However, he then spots a flickering pixel that has escaped from an old video game console located in the restaurant kitchen. This mischievous pixel uses its magic to steal the shelf supports. After Max destroys the pixel, the shelf supports suddenly reappear, allowing Max to continue climbing.

Aware that they cannot directly confront Max, the pixels call upon a fly from an old video game console to eliminate him.

### **Game Controls:**

-Left and Right: Use the joystick to move the cat left and right.

-Up and Down: Use the joystick to climb up or down the shelves.

-Button: Press the button on the joystick to activate the freezing power, allowing the items to stay suspended in mid-air.

### **Tip for Climbing and Descending:**

To assist Maks in climbing up or descending from the shelves with greater ease, move the joystick upwards or downwards before reaching the shelf supports while in motion.

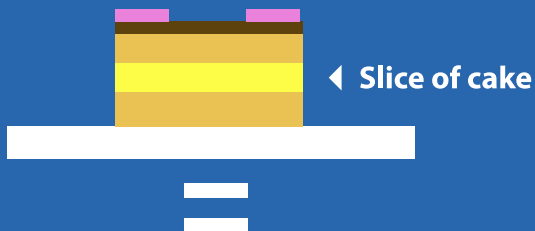

### **Scoring:**

Each item that falls and is collected by Max is worth 10 points. When Max reaches the slice of cake, it is worth 1000 points!

### **Additional Information:**

-Game Levels: There are 4 challenging levels in the game. After completing all levels, the game restarts with faster-falling items, offering a new challenge for experienced players.

-Item Speed Increase: Reach the cake by avoiding unnecessary delays on a level. Your goal is to reach the slice of cake, so prolonged stays on a level will result in faster-falling items, making it difficult to keep up
